## Algebra 2: Section 7-4, Ellipse

**Equations of Ellipses:** An **ellipse** is the set of all points in a plane such that the *sum* of the distances from two given points in the plane, called the foci, is constant. An ellipse has two axes of symmetry which contain the **major** and **minor axes**. In the table, the lengths a, b, and c are related by the formula  $c^2 = a^2 - b^2$ 

\*\*\* Please note that a, b, and c are related to the Pythagorean theorem, but not the same parts! \*\*\*

Standard Form of Equation	$\frac{(x-h)^2}{a^2} + \frac{(y-k)^2}{b^2} = 1$ where $b^2 = a^2 - c^2$	$\frac{(x-h)^2}{b^2} + \frac{(y-k)^2}{a^2} = 1$ where $b^2 = a^2 - c^2$
Center	(h, k)	(h, k)
Direction of Major Axis	Horizontal	Vertical
Foci	(h - c, k) & (h + c, k)	(h, k + c) & (h, k - c)
Length of Major Axis	2a units	2a units
Length of Minor Axis	2b units	2b units

Every ellipse has two axes of symmetry. The points at which the ellipse intersects the axes define two segments with endpoints on the ellipse. The longer segment is called the <u>major axis</u>; the shorter the <u>minor axis</u>. The foci always lie on the major axis. The intersection of the two axes creates the center.

The sum of the distances from the foci to any point on the ellipse is 2a. The distance from the center to a focus in c. The length of the major axis is 2a. The length of the minor axis is 2b. Notice that a > b. It follows that  $a^2 > b^2$ . Thus, if  $a^2$  (the bigger number) is the denominator of the  $(x - h)^2$  term, the foci are on the horizontal x-axis. If  $a^2$  (the bigger number) is the denominator of the  $(y - k)^2$  term, the foci are on the vertical y-axis.

Eq: 
$$\frac{16x^2 + \frac{4x^2}{144} + \frac{144}{144}}{\frac{144}{144}}$$
 |  $\frac{x^2}{144} + \frac{4x^2}{144} + \frac{144}{144}$  |  $\frac{x^2}{144} + \frac{x^2}{36} = 1$ 

(x-0)<sup>2</sup> +  $\frac{(y-0)^2}{36} = 1$ 

(x-0)<sup>2</sup> +  $\frac{(y-0)^2}{36} = 1$ 

(2 |  $\frac{x^2}{36} + \frac{x^2}{36} = 1$ 

(2 |  $\frac{x^2}{36} + \frac{x^2}{36} = 1$ 

(2 |  $\frac{x^2}{36} + \frac{x^2}{36} = 1$ 

(3 |  $\frac{x^2}{36} + \frac{x^2}{36} = 1$ 

(b) |  $\frac{x^2}{36} + \frac{x^2}{36} = 1$ 

(c) |  $\frac{x^2}{36} + \frac{x^2}{36} = 1$ 

(d) |  $\frac{x^2}{36} + \frac{x^2}{36} = 1$ 

(e) |  $\frac{x^2}{36} + \frac{x^2}{36} = 1$ 

(e) |  $\frac{x^2}{36} + \frac{x^2}{36} = 1$ 

(f) |  $\frac{x^2}{36} + \frac{x^2}{36} = 1$ 

(g) |  $\frac{x^2}{36} + \frac{x^2}{36} = 1$ 

(h) |  $\frac{x^2}{36} + \frac{x^2}{36} = 1$ 

(e) |  $\frac{x^2}{36} + \frac{x^2}{36} = 1$ 

(f) |  $\frac{x^2}{36} + \frac{x^2}{36} = 1$ 

(g) |  $\frac{x^2}{36} + \frac{x^2}{36} = 1$ 

(h) |  $\frac{x^2}{36} + \frac{x^2}{36} = 1$ 

(e) |  $\frac{x^2}{36} + \frac{x^2}{36} = 1$ 

(f) |  $\frac{x^2}{36} + \frac{x^2}{36} = 1$ 

(g) |  $\frac{x^2}{36} + \frac{x^2}{36} = 1$ 

(g) |  $\frac{x^2}{36} + \frac{x^2}{36} = 1$ 

(h) |  $\frac{x^2}{36} + \frac{x^2}{36} = 1$ 

(e) |  $\frac{x^2}{36} + \frac{x^2}{36} = 1$ 

(f) |  $\frac{x^2}{36} + \frac{x^2}{36} = 1$ 

(g) |  $\frac{x^2}{36} + \frac{x^2}{36} = 1$
